

Situation

- **5,000 customers, 36.88% churn, 1,844 churned customers.**
- **61.7% orders delayed , 8.62% cancelled**, creating a major retention and revenue challenge.

Opportunity

- **369 customers retained** by reducing churn by **20% relative**.
- **₹99.94 increase in CLV/customer**, from **₹399.74 to ₹499.68**.
- **₹5.06L incremental revenue** by moving total revenue from **₹20.26L to ₹25.32L**.

Question

- How can Swiggy reduce churn from **36.88% to 29.50%**?
- How can Swiggy convert delayed and cancelled orders into repeat orders?
- How can Swiggy increase **CLV** from **₹399.74 to ₹499.68** per customer?

Metric	High Value, High Frequency	Loyal but Price Sensitive	At-Risk High Value Customers
 5000 Count	1262	1673	2065
 AOV	₹ 457.94	₹ 301.33	₹474.72
 Total Revenue	₹ 5,77,291	₹5,04,132	9,80,692
 AVG app Usage	17.5 DAYS	12.5 DAYS	11 Days
 %of total	34.04%	28.87%	37.09%

Based on the key metrics above, **High Value and loyal Customers** show the best opportunities for expansion,

PROBLEM

Pain Point: High Delivery Delays

WHY 01

Actual delivery time frequently exceeds customer expectation.

WHY 02

ETA shown to customer is inaccurate at time of ordering.

WHY 03

ETA algorithm ignores real-time traffic, kitchen load & partner availability.

WHY 04

System relies on static historical averages, not live inputs.

WHY 05 (Root Cause)

Dynamic ETA engine has never been prioritized by Product & Tech.

61.7% orders delayed

81.4% churned customers faced late delivery

Average delay: 11.31 mins

2.7% orders delayed 15+ mins

➤ No dynamic ETA engine integrating traffic + kitchen load + partner availability

Solution : Dynamic ETA Engine (Delivery Accuracy)

Problem it solves: Delivery delay-driven dissatisfaction and low Delivery Rating. 

What it does: Uses real-time inputs including traffic congestion, restaurant preparation status, and partner GPS data to calculate and continuously update the delivery ETA shown to the customer

PROBLEM SOLVED High order cancellation rates & delivery delays driven by restaurant non-acceptance and unmonitored kitchen preparation times.

SLA Scoring Engine

Automated real-time scoring tracking order acceptance speed, preparation time, and historical merchant cancellation behavior.

Auto Rerouting & Cancel

Orders unaccepted after 5 mins trigger dynamic auto-cancellation and instant rerouting to nearby outlets with matching menus.

Dynamic De-prioritization

Outlets breaching acceptance SLAs >3 times weekly trigger automated search ranking demotion and temporary feed de prioritization.

Merchant Rewards & Dash

Live SLA dashboard for merchant visibility, paired with zero-commission perks and priority placement for top-tier SLA compliance.

KPIs Measurement Baseline

KPIs to keep an eye on

Tier 1 Business Health KPIs:

Active Customer Rate : 63.12%
 Churn Rate 36.88% : 405.12 INR
 AVG Total Amount : Overall
 AVG Total Amount : 399.74 INR
 Repeat Active Customers : 2042

R

High 36.88% churn may reduce the active customer base

M

Launch targeted retention offers and personalized reactivation campaigns for churn-risk customers.

1

Monthly Repeat Orders per Active Customer = 0.647

This means on average each active customer places 0.647 repeat orders per month.
 Target should be to push this above 0.80 by end of Q4.

R

Low ETA accuracy (47.90%) and delivery rating (3.780) may hurt customer satisfaction

M

Improve delivery-time forecasting, rider allocation, and real-time tracking to increase on-time deliveries.

1

Tier 2 Product Experience KPIs:

ETA Accuracy within 5 mins : 47.90%
 Cancellation Rate : 8.62%
 AVG Customer Rating : 3.877
 AVG Food Rating : 3.986
 AVG Delivery Rating : 3.780

R

Repeat orders at 0.647 per active customer are below the 0.80 Q4 target

M

Drive repeat purchases through loyalty rewards, personalized offers, and timely reorder nudges.

Key Takeaway

Customer health is weak due to 36.88% churn, low repeat frequency (0.647 vs. 0.80 target), and poor ETA accuracy (47.90%), while ratings remain moderate.
